ANIMAL GENETICS
CANINE TEST REPORT: COLOUR LOCUS D

Client's Name: NICOLE GERSTENBERG
 Client's Address: 27 BARRY STREET
 HOUT BAY
 7806
 Client's Tel No.: 082 218 6664

Canine's Name: KWA-ZURI OF TAUTONGA
 Breed: RHODESIAN RIDGEBACK
 Registration No.: ZA005270B17
 Microchip No.: 945000001816940

Genetic Test: **COLOUR LOCUS D**
 Result: **DD**

DILUTION GENE/ D-LOCUS:

Melanophillin is required to transport and position cells containing melanin. Melanophillin is encoded by the MLPH gene. A mutation in the MLPH gene or D locus, affects the dilution of eumelanin and phaeomelanin. "D" is non-dilute and will have an intense colour. "d" is recessive, and "dd" is required to dilute colour, which gives rise to blue (BBdd/Bbdd), Isabella/lilac (bbdd) or champagne (eedd).

Drögemüller et al 2007. A noncoding melanophilin gene (MLPH) SNP at the splice donor of exon 1 represents a candidate causal mutation for coat color dilution in dogs. Journal of Heredity 98(5), p468-73.

Disclaimer: This report does not disregard the existence of any unknown or rare variant of MLPH gene that may cause dilution.

COLOUR RESULT:

		MATERNAL CANDIDATE						
		D	D	D	d	d	d	
PATERAL CANDIDATE	D	D	DD	DD	DD	Dd	Dd	Dd
			All non-dilute		All non-dilute		All non-dilute	
	D	d	DD	Dd	DD	Dd	Dd	dd
			All non-dilute		Non-dilute	Dilute	Non-dilute	Dilute
	d	d	Dd	Dd	Dd	dd	dd	dd
			All non-dilute		Non-dilute	Dilute	All Dilute
